

About IE (I), Uttarakhand State Centre

The Institution of Engineers (India) was established during 1920 with a mission to provide quality education, training and applied research in the fields of technology and management to assist the engineering fraternity to be innovative and advanced to meet the challenges in the unbounded world of tomorrow and to be the front line interface between academia, research, industry and other sectors in advanced Engg/ Tech application and key enabler in fostering high and thrust area programmes and was registered under the Indian Companies Act 1913. It was granted the Royal Charter Incorporation during 1935. Presently it has 15 engineering disciplines and about 50 lakh members. The Institution of Engineers (India); IE(I), Uttarakhand State Centre came into existence with the formation of the State of Uttarakhand. Earlier it was a chapter under Uttar Pradesh State Centre.

About IATE

INDIAN ASSOCIATION OF TEACHER EDUCATORS
The Indian Association of Teacher Educators, registered under the Societies Registration Act XXI, R.No. S/3012 dt. 28.9.66. IATE is the representative organization of Teacher Education in the country representing about 1350 Teacher Education Institutions and 12000 teacher educators including 69 foreign educationists. The association is devoted to the development of Teacher Education and its application for the improvement of teaching and training. IATE brings out a journal of its own known as "Teacher Education" and a quarterly news letter "IATE News". It gives IATE immense satisfaction and sense of responsibility to announce that Indian Association of Teacher Educators has completed more than 57 years of its working. It has contributed its bit in bringing quality improvement in teacher educators and enhancing the status of teachers during the last more than five decades. The Society has undergone rapid changes during the period and under the changed socio-political set up to meet the new challenges. Technological changes are making it more complex requiring high level of professionalism. As a dynamic organization we take up such challenges and suggest ways and means to overcome the hurdle after due deliberations and discussions.

About Dehradun

Dehradun, the capital of Uttarakhand is situated in the foothills of Himalayas, about 230 Km from Delhi. It is well connected by air from Delhi and by road and rail from major cities of India. Several research and development institutions of international and national repute namely Forest Research Institute (FRI), Indian Military Academy (IMA), Wadia

Institute of Himalayan Geology and Oil and Natural Gas Corporation (ONGC), to name a few are located here. Mussoorie, the famous hill station and Rishikesh and Haridwar are within 70 Km. from Dehradun. It has a pleasant weather throughout the year.

International Seminar on QUALITY OF PROFESSIONAL EDUCATION IN THE PRESENT ERA

25th- 26th, July, 2009

Organized by

The Institution of Engineers (India)
Uttarakhand State Centre, Dehradun
&
Indian Association of Teacher Educators (IATE)

Background

Professional education plays a pivotal role in human resource development. The system of professional education needs a thorough scrutiny of its aims, objectives, methods and procedures in the present era. In the present day world knowledge and skills have emerged as key factors in the quest for sustainable human development. Therefore the role of professional education has become many times more important. Today we are witnessing an unprecedented demand for diversification in professional education, together with an increased awareness of its vital importance for socio-cultural and economic development globally. In such a situation our endeavour should be to enhance the quality of professional education in different fields.

Keeping this in view an International Seminar is being organized under the auspices of IATE and IEI to threadbare the emerging trends, issues and challenges in the field of professional education and to evolve ways and means to strength the system of professional education in India so that it may cater the need of young generation in the present era.

The challenges of attracting students, economic competitiveness, communications and sustainable

development have made quality becoming the touchstone in higher education all over the World. Whatever be the method of teaching, institutions of higher learning are facing unprecedented problems of credibility and quality. Public policy decisions' reliance on technology has necessitated professional programmes to be relevant, attractive and connected. Thus students should be prepared for a broader range of careers, as well as lifelong learning involving both formal programmes and hands-on experience. Consequently, programmes should be attractive so that the excitement and intellectual content of professional education may attract highly talented students as well as empowering them to succeed. These should also be connected to the needs of the broader community through integrated activities with other parts of the educational system, industry and government Innovative approaches of teaching, learning, recruitment, retention, educational and research relationships are essential.

A key element of success in these endeavours is strong partnership of professional institutuons with industries, institutes, colleges, the broader university community and the Government. Quality embraces the activities through which a department satisfies itself that the quality of education it provides and standards it has set are

appropriate and are being maintained .Quality system should exist in the context of policy and structures of the quality framework and should control quality and standards throughout the educational process and support staff in achieving the quality policy.“Without education as a core policy, innovation will remain unsupported”. It must promote talent and creativity from an early stage. Innovation is the missing element in the scenario. Higher Education has a crucial role for innovation in all areas of knowledge, from humanities to advanced science, and in all sectors of society, public and private. Innovation is based on the transfer of knowledge and ICT provides unprecedented opportunities for it.

The process of liberalization & globalization has created enormous opportunities & challenges & in the era of global competitiveness, we have to exercise utmost care to safeguard, India's interest to see that India does not loose in international arena. In the era of these fast emerging changes, there is a need for future global managers with qualities and competencies in global perspective. Quality is the only currency, which is accepted universally & it is also true in the case when product is education. Every customer is now quality conscious & it is also imperative that a passion for quality is developed in the International as well as Indian psyche. In education, quality has become a necessity & circumstances require total quality management. To make India an intellectual capital of the world we have to rethink about the education & effort should be made to create a dynamic environment which can improve quality in professional institutions.

Themes

- Trends, issues and quality in professional education
